sustainable and economic stability for farmers and the communities they serve. Veterinary vaccines have a major role in protecting animal health and public health, reducing animal suffering, enabling efficient production of food animals to feed the burgeoning human population, and greatly reducing the need for antibiotics to treat food and companion animals.

He said that foot-and-mouth disease (FMD) is a severe, highly contagious viral disease with devastating economic and social impacts. The virus affects cloven hoofed animals such as cattle, sheep, goats, and pigs, and it is listed by the World Organization for Animal Health (OIE) as obligatory declaration with the highest health risk. The economic impact of FMD is not only due to the direct losses caused by emergence of clinical cases, but also for the international trade restrictions on animal products belonging from those countries where the disease is present, or even when the countries are free from the disease because of vaccination. He also guide the students how to identify major viral diseases of livestock and poultry with symptoms and provide vaccination schedule to the students for extension purpose. Dr. Yadav also discussed on doubling farmer income through poultry, fisheries and dairy farming.

Finally, Ms. Akanksha Sharma thanks to Dr. K.K. Yadav on behalf of the School of Agricultural Sciences, KRMU (Gurugram) for very informative session .
