FINE-TUNING LLM ON SPIRITUAL CONVERSATION

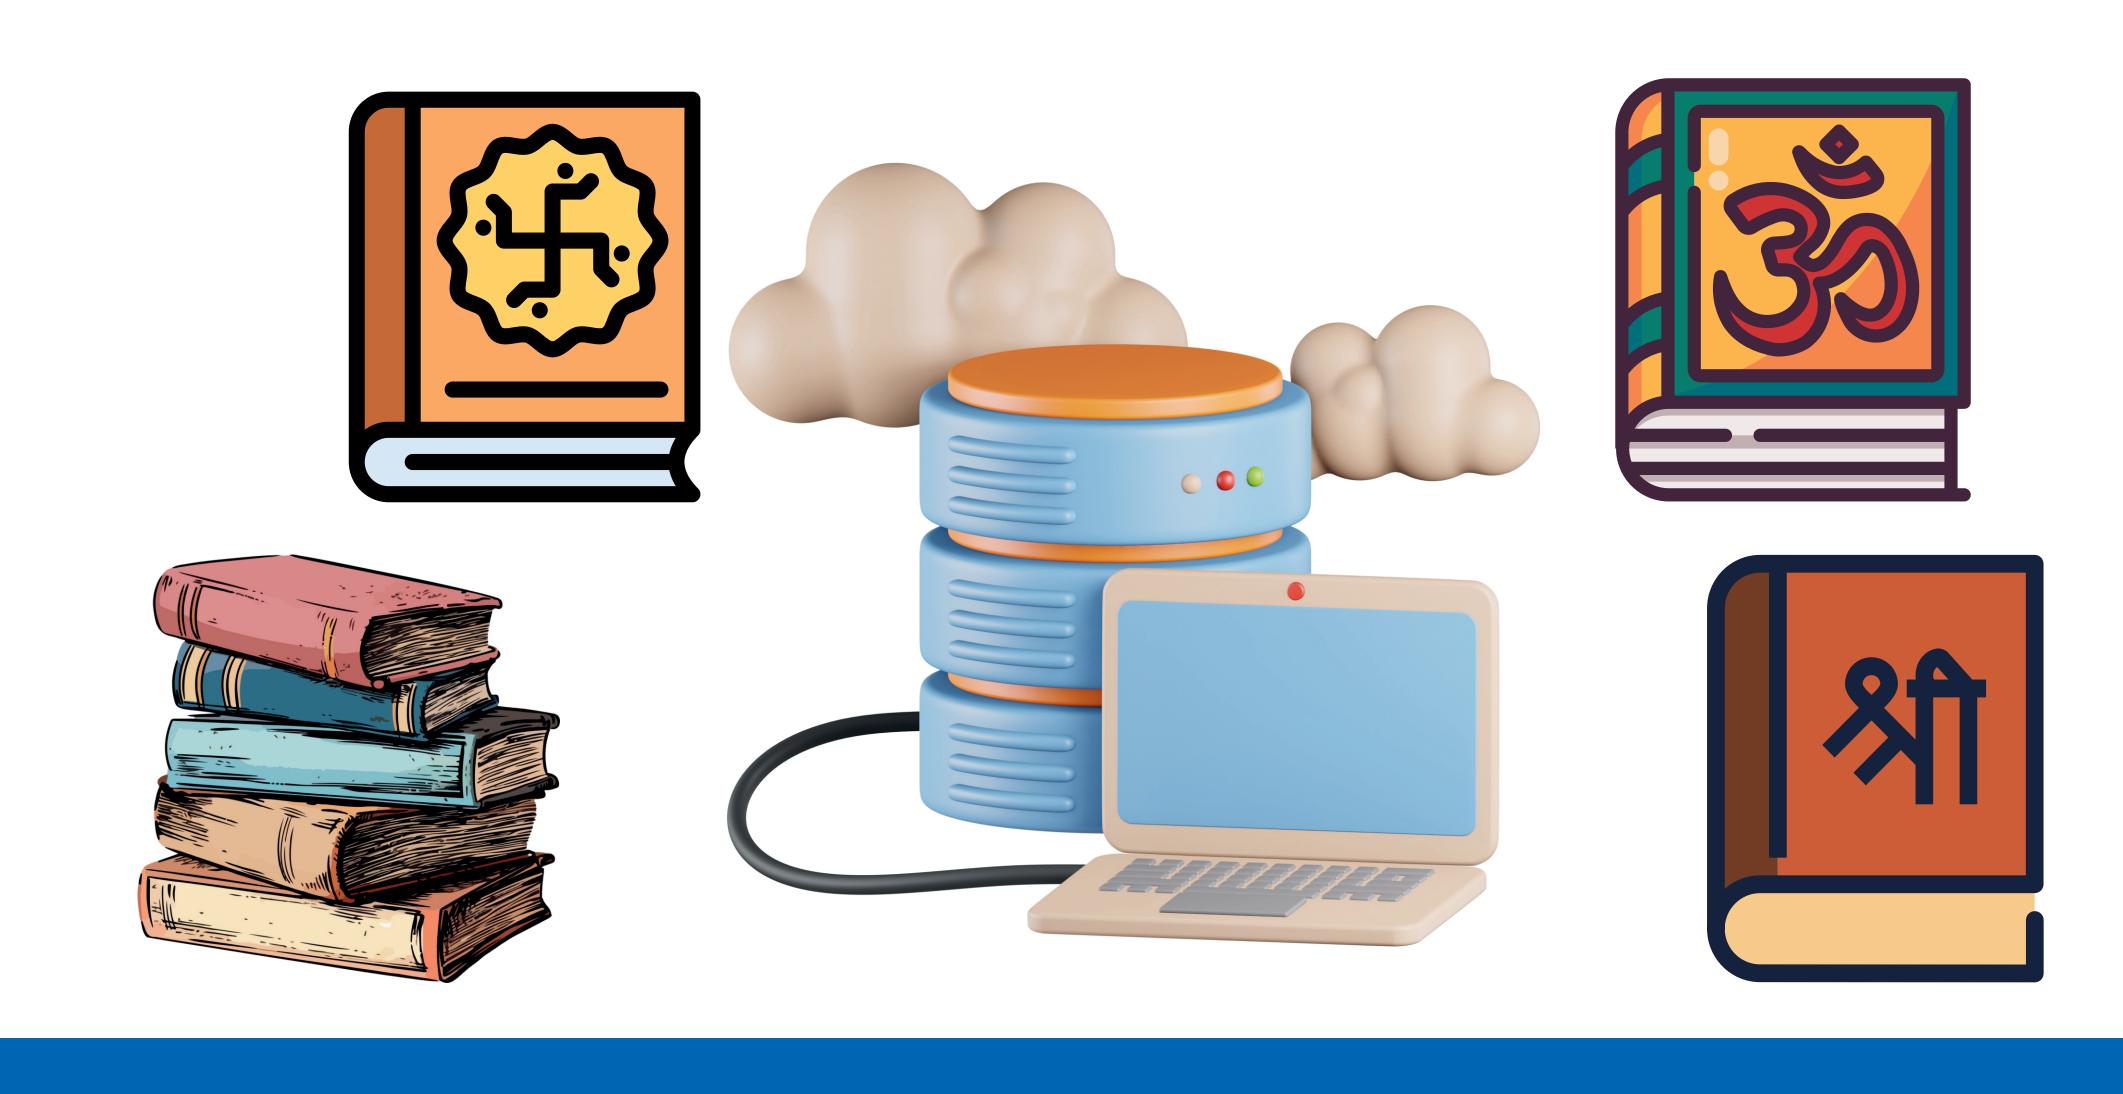

Progress Overview

- Research and Approach Formulation
- Dataset Collection
- Model Selection
- Fine-Tuning Process
- Testing and Evaluation
- Implementation of Advanced Architecture
- Future Enhancements

The project aims to create a general chatbot powered by advanced AI that utilizes the wisdom of ancient texts, to help individuals, particularly those facing mental challenges like anxiety and loneliness.

Objective

Outcome

- AI-Powered Chatbot for Support:
 Chatbot that provides real-time,
 supportive responses tailored to
 users' emotional needs.
- Integration of Ancient Texts:

 Utilizes texts like the Vedas to offer insights making timeless teachings accessible to modern users.
- Guidance for Mental Wellness:
 Answers aimed at addressing
 loneliness, and aligning responses
 with users' mental health needs.
- Knowledge Base Expansion:
 Continually adds more ancient texts
 to create a comprehensive resource
 for diverse challenges.
