

Students has taken the pledge to take K.R. Mangalam University the campus carbon emission-free by 2027.

The pledge taken as follows:

“We, the students, faculty, and staff of K.R. Mangalam University, solemnly pledge that our university will be totally carbon emission-free by the year 2027

We realize that environmental degradation and global warming are not far-off issues but real concerns pressing on life at this very moment. As responsible citizens and future leaders, we believe that it is not possible to teach sustainable living at some later stage; it has to be a part of our values, actions, and day-to-day practicalities.

Inspired by the vision of our nation for a green and sustainable India, and guided by the call of our Hon’ble Prime Minister to reduce dependence on fossil fuels and harness renewable energy, we commit ourselves to this noble mission.

We value the invaluable worth of nature: the air we breathe, the water we drink, and the land that nourishes us. We recognize that every breath we take is a gift from our Earth-a reminder of our responsibility to Respect, Appreciate, and Protect our environment.

Therefore, we pledge that at KRMU:

We will actively work towards net-zero carbon emissions by 2027 with renewable energy, energy-efficient systems, and green infrastructure.

We will minimize waste, do without single-use plastics, and adopt recycling and circular economy practices.

We will make gardening, tree plantation, and biodiversity conservation an integral part of our campus life.

We will make sure every classroom, every laboratory, and every office inculcates green habits, from switching off the lights to going paperless.

Our efforts shall foster research, innovation, and entrepreneurship toward sustainable solutions to the challenges facing our planet.

We will engage with communities, both within Gurugram and well beyond, to build awareness and inspire action for a greener tomorrow.

With hearts full of hope and hands ready for change,

We pledge to make K.R. Mangalam University a role model of environmental stewardship, a place where education will empower, innovation will sustain, and every individual will be contributing to the well-being of our 'Mother Earth'.

Together, we resolve that we will not ruin our planet, we will save it. Together, we commit — we will achieve a Carbon-Free KRMU by 2027. “For the Planet. For the People. For the Future.” Pledge”
